Chitkara University, Punjab

- **Reclaimr** is a SaaS-based Revenue Response Automation System built for inbound-driven businesses.
- Businesses lose 20–30% of inbound leads due to missed calls, slow response time, and lack of structured follow-up.
- Traditional CRM systems focus on data storage and pipeline tracking but lack real-time engagement automation.
- Leads are highly time-sensitive — customers contact multiple competitors simultaneously and the first responder often wins the deal.
- Reclaimr addresses this gap by providing an automated revenue recovery layer that works on top of existing systems.

A Core, Universal Issue:

- Businesses lose 20–30% of inbound leads due to: missed calls, slow response time, and lack of follow-up.

Traditional CRM Systems:

- Focus on data storage and pipeline tracking.
- Lack real-time engagement automation.

Leads are Highly Time-Sensitive:

- Customers contact multiple competitors simultaneously.
- First response often wins the deal.

No Structured System for:

- Instant response (<60 seconds), multi-step follow-up sequences, lead reactivation campaigns.

Result:

- Increased customer drop-off, lower conversion rates, and significant revenue leakage.

Objective of the Project (RAID)

REDUCE:

- Lead leakage
- Response delays

AUTOMATE:

- Lead engagement
- Follow-ups
- Customer reactivation

INCREASE:

- Conversion rates
- Revenue retention

DEVELOP:

- A Revenue Response System using Modern Web Technologies

Proposed Solution

Core Value Proposition:

- **Proposed Solution:** A SaaS-based automation platform.
- **Integrates with:** Phone systems and web forms.
- **Enables:** Instant SMS response, automated follow-ups, and lead resurrection campaigns.
- **Expected Revenue Increase:** 15–25% due to faster response time and recovery of missed opportunities.
- **Lead Conversion Rate Improvement:** 20–35% via instant engagement (<60 sec), structured follow-up sequences, and reduced lead drop-off.

Key Concept: "A revenue recovery layer that works on top of existing systems."

80% of customers choose the first business that responds. 5x faster response can increase lead conversion probability.

Event-Driven Architecture — Core Modules:

- 1. Event Detection Layer:** Captures missed calls and form submissions.
- 2. Automation Engine:** Rule-based workflow execution.
- 3. Communication Layer:** SMS via Twilio API.
- 4. Frontend Interface:** Next.js dashboard.

Key Metrics:

- Response Time (<60 seconds)
- Missed Call Recovery Rate (%)
- Lead Conversion Rate (%)
- Message Delivery Rate (%)
- Recovered Revenue per Client (\$)

Technology Stack

- **Frontend:** Vite + Next.js (React Framework) + Typescript + Tailwind CSS + Recharts + Vercel
- **Backend:** Node.js + Express.js + dotenv + Nodemon + cors
- **Database:** PostgreSQL + node-postgres (pg)
- **Communication APIs:** Twilio (SMS and Call Handling)
- **Additional:** REST APIs, Webhooks, Redis / Queue (BullMQ)
- **Devops & Infrastructure:** docker + dockerfile + Render.com

System Capabilities:

- Event-driven workflow execution
- Real-time webhook processing
- Automated SMS trigger pipelines
- Queue-based task scheduling (BullMQ)
- Scalable multi-tenant architecture

Key Features

Core Functional Capabilities:

- Automated Missed Call Recovery
- Instant Lead Response (<60 seconds)
- Lead Resurrection Campaigns
- SMS-based Communication System
- Real-Time Message Tracking
- Rule-Based Automation Engine
- Multi-Tenant SaaS Architecture

System Performance Impact:

- <60 sec average lead response time
- 10–20% recovered lost leads

Automated Workflow Execution Pipeline:

Real-time event processing triggers automated workflows for instant lead response and follow-up.

System Workflow:

- 1. User initiates interaction:** Call or web form submission.
- 2. Event captured:** Via webhook.
- 3. Backend processes event:** Automation engine triggers workflow.
- 4. SMS sent:** Via Twilio API.
- 5. User replies:** System updates status.
- 6. Data stored:** For analytics and reporting.

Expected Outcome

Real-Time Response System:

- Instant engagement with leads within 60 seconds.

Automated Follow-Up Engine:

- Multi-step follow-ups without manual effort.

Lead Recovery Mechanism:

- Reactivation of inactive or missed opportunities.

Scalable SaaS Architecture:

- Supports multiple businesses with isolated data.

Measurable Business Impact:

- 15–25% expected revenue increase through faster response and lead recovery.
- 20–35% improvement in lead conversion rates.

Conclusion and Key Takeaways

Scalable Solution and Future Expansion:

ReclaimrTech provides an automated revenue response system that improves lead engagement, reduces response delays, and minimizes revenue loss. By leveraging event-driven workflows and real-time communication, the system enhances conversion efficiency for inbound-driven businesses.

Future Scope:

- AI-based message optimization
- Multi-channel integration (WhatsApp, Email)
- Advanced analytics and reporting
- Expansion across multiple industries
